MEGADETECTION: PANDA'S SECURITY MODEL

The security model offered by Panda Security is based on four pillars that guarantee detection of more than a million viruses and other threats, offering levels of protection far higher than other security solutions.

1+2+3+4 PERMANENT PROTECTION

Daily automatic updates and continuous product upgrades provide permanent security against Internet threats.

1+2+3+4 PROACTIVE PROTECTION

TruPrevent Technologies detect and block unknown threats, intelligently scanning potentially dangerous program behavior.

1+2+3+4 IN-DEPTH ONLINE SCANNING

The exclusive technologies of Panda TotalScan Pro allow periodic in-depth online scanning, to detect and delete the most sophisticated threats that can slip past traditional protection.

1+2+3+4 24h - 365d TECHNICAL SERVICES

Specialized 24h-365d technical services, via email or at www.pandasecurity.com

Antivirus

Detects and eliminates all types of viruses, worms and Trojans

You can use the Internet and download or share files in the knowledge that you are fully protected against all types of viruses, worms, and Trojans.

Antispyware / Antiadware

Stops anyone spying on you on the Internet

Detects and eliminates spyware and other programs that install themselves on your computer without your permission.

Identity Protect

Keeps your personal data safe from online identity theft

You will know exactly how and when your sensitive data (account numbers, credit card details, etc.) is going to be sent out, so you will always have control of it.

Personal firewall

Prevents hacker attacks, even in WiFi networks

When you connect to the Internet, many programs try to access your PC. Some of them are not dangerous, such as those that let you update applications you have installed, but others will try to exploit your connection or control your computer.

Antiphishing

Lets you bank or shop online securely

It can identify fraudulent emails, preventing you from giving away your passwords, account numbers, or confidential data, so you will be safe from these dangerous scams.

Antispam

Automatically blocks junk mail

Automatically filters junk mail, keeping your inbox spam-free.

Antirootkit

Detects and eliminates hidden threats

Its reinforced protection detects threats that try to hide on your PC.

Parental control

Ensures your kids only see appropriate content

Its content control feature can let you decide what type of web pages each user of a computer can view, with a range of custom filters (child, adolescent, employee...).

Backup and restore

Automatic security copies of your important files and documents

You can simply and automatically backup your files to easily recover important documents.

In-depth online scanning

Deep scanning of your PC with TotalScan Pro

You can scan your PC in-depth whenever you want and remove all threats that might have slipped past traditional protection.

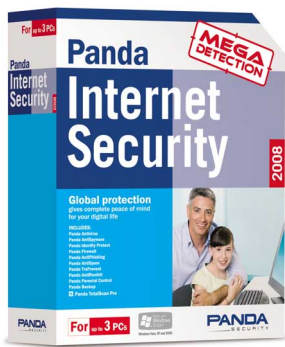

TruPrevent intelligently analyzes the behaviour of programs, blocking those that try to damage your PC.

This adds another layer of protection on top of the antivirus.

PANDA
SECURITY

One step ahead.
