Panda Software Updates Security Suites

By Jack M. Germain
 September 19, 2005 9:10AM

Patrick Hinojosa, Panda Software's CTO, said the computing industry is facing two high-threat areas from the newest kinds of phishing attacks. The most publicized of these is URL switching, but the bigger threat comes from Trojans that open back doors in poorly protected computers.

BPM Industry Alert

Panda Software aims to take intrusion prevention to a new level with the release of its 2006 security-software lineup. The company has updated its entire line of consumer products with a new [security](#) technology that uses artificial intelligence to stop infections from viruses, spyware, Trojans, worms and other malicious software.

Panda updated its consumer-level suite of products -- Platinum Internet Security 2006 and Titanium Antivirus and Antispyware 2006 -- to offer more proactive security protection for users in all kinds of environments. The products include modules to protect against spyware and phishing.

They also include modules to detect Wi-Fi intrusions and protect users from hitherto unknown fraud threats by analyzing the behavior of new attacks without having to wait for updates to the signature [database](#).

Integrated Packages

The 2006 version of Platinum Internet Security is fully configurable and uses a new detection engine designed to improve the speed and efficiency of the software's security analysis.

Titanium Antivirus and Antispyware 2006, meanwhile, is a consumer-level software package that reflects a growing trend among security-software developers to combine virus and spyware protection in one integrated package.

New features in the Titanium suite are designed to boost the effectiveness of spyware blocking through a signature-based, malware-detection engine that the company updates daily.

Multifaceted Approach

Patrick Hinojosa, Panda Software's CTO, said the computing industry is facing two high-threat areas from the newest kinds of phishing attacks. The most publicized of these is URL switching, but the bigger threat comes from Trojans that open back doors in poorly protected computers.

"As a result, consumers are losing control of their personal data," he said. "We built in a multifaceted approach. There is no

protection on a software level for social engineering that criminals use to steal identities. But we do provide a hoax database to protect users from potential identity theft."

In addition to the consumer-level software tools, Panda has updated its TruPrevent software, a security suite designed for business desktops. The software brings together firewall software, antispam technology and modules for safeguarding privacy and controlling access to Web pages.

Pricing for Platinum Internet Security starts at \$79.95, while Titanium 2006 Antivirus and Antispyware starts at \$49.95. TruPrevent Corporate starts at \$375 for 5 licenses.
