- Simple installation and setup of the various solutions.
- Increased employee productivity.
- Minimized operational costs.
- Enhanced policy compliance.
- Simplified risk management.
- Protection of the company's critical assets.

"With so many diverse computers, we need a centralized security management system which adapts to our network and requires as little maintenance as possible. Panda Security delivers the tools that meet these requirements".

Samuel Recuenco. Central IT Manager. AhorraMas

WHY PANDA SECURITY?

About AhorraMas

AhorraMas S.A. is a retail distribution company established in 1979 by a group of Madrid retailers. It currently includes several companies that run supermarkets under the trade name Supermercados AhorraMas.

There are now more than 185 Supermercados AhorraMas outlets across Madrid, Guadalajara, Toledo, Cuenca and Ciudad Real, placing AhorraMas S.A. among the market leaders.

AhorraMas operates in the local supermarket sector, with stores ranging from self-service shops of 150 or 200 m², to supermarkets of up to 1,800 m², with some of these in shopping centers.

Requirements

AhorraMas needed a complete protection system which covered all entry points through which the company could be infected by malware: endpoints and servers, Web traffic and email.

Its main concern was that any solution would have to be highly effective yet require as few resources as possible. At the same time, it needed complete control -from a single, centralized point- over the security of 150 computers, to avoid wasting time continually checking the updates and security status of its systems.

Additionally, it was receiving high levels of spam, resulting in a considerable waste of time and resources.

Solution

Panda
Global Business Protection
Security solutions for your business

COMPLETE PROTECTION FOR:

PCs and servers	Web traffic	Email

Whatever your company, from the smallest business to the largest corporation, Panda Security provides the global solution that best adapts to your protection needs. Easy to install, easy to maintain and easy to afford.

What's more, our products provide maximum protection through Collective Intelligence, disinfecting thousands of new threats every day, including those not detected by other security solutions.

Why choose Panda Global Business Protection?

Because it offers comprehensive protection for your company:

- Solutions for PCs, laptops and servers.

- Email protection solutions.

- Solutions for protecting Web traffic.

The solution: Panda Global Business Protection

Panda Global Business Protection is the comprehensive security solution that AhorraMas needed, as it offers complete protection for endpoints, the network perimeter and email.

For endpoint protection, the security solution used was **Panda Security for Business.** Samuel Recuenco, Central IT Manager at AhorraMas, says: *"We currently have a centralized AdminSecure console on a server and from there we can automatically update all our 150 computers. In our department we only have to manage the installation of one office, yet this is extremely complex in terms of geographic distribution, as it is our central warehouse. From the centralized AdminSecure console we can monitor all the computers in our company at a glance".*

Panda Global Business Protection also protects the company's Internet use, the entry point for up to 99% of computer threats. *"For perimeter protection we have two Panda GateDefender Integra appliances, one of which acts as a backup, which help us both in terms of network segmentation and in delivering a 100% effective security solution which is invisible to users",* says Recuenco.

Finally, this comprehensive Panda Security solution also offers complete email protection to the company, effectively combating spam, phishing and other types of malware that enter through this channel. Recuenco concludes that *"Email protection for our company is delivered through Panda Cloud Email Protection. This tool is as simple to implement as it is effective. Since we have been using it the level of spam we receive has been drastically reduced, practically eliminating the time wasted by users in dealing with junk mail".*

Overall, thanks to the simple implementation, the capacity to adapt to specific requirements and the low number of incidents, the cost of setting up the different solutions comprising **Panda Global Business Protection** has been extremely low.
