# Cleaner Monitor

Do you think your network could be infected,
even though your antivirus tells you otherwise?

WHAT IS IT?

This is an advanced disinfection tool that runs a complete scan based on Collective Intelligence or cloud scanning in order to **eliminate malware that traditional antivirus products are unable to detect.** The benefits of having 25 years' experience detecting and disinfecting malware have enabled us to develop **a solution that can monitor all the scans on your network and eliminate any latest generation viruses detected, remotely and from a centralized point.**

BENEFITS

🚀 Latest technology

Includes the latest technologies, which are more aggressive than conventional antivirus solutions in detecting and disinfecting latest threats.

🔄 Automatic reset

Cuts out the manual tasks of restoring infected systems, automatically undoing the changes made by malware to operating systems and restoring system policies.

☁ Central monitoring

Stores all scan and disinfection results in a single cloud-hosted repository for all computers on the network. Access it through a simple Web browser and get the information that you need .

Compatible con:

— Windows 8 (32 and 64-bit)

— Windows 7 (32 and 64-bit)

— Windows Vista (32 and 64-bit)

— Windows XP SP2 or later (32 y 64-bit)

— Windows 2000 Professional

— Windows Server 2003 (32 and 64 bits)

— Windows Server 2008

— Windows Server 2008 R2

— Windows Server 2012 (32 and 64 bits)
