Case Study. Institute for Cultural Heritage. The Netherlands.

“It is really designed to offer users maximum simplicity and network administrators no headaches about virus updates, scans,...”

Ernst te Brake
Network and System Manager
Institute for Cultural Heritage

Institute for Cultural Heritage in The Netherlands (ICN).

EnterpriSecure provides completely centralized corporate virus protection for ICN.

The Institute for Cultural Heritage in The Netherlands resides in Amsterdam and Rijswijk and is attached to the Ministry of Education, Culture and Science.

The institute has all the facilities required to conduct independent research, organise courses and manage collections. The ICN team includes conservation experts, art historians, historians, physicists, chemists, conservators, restorers and educationalists. Information specialists support the various departments. More then hundred experts are working in interdisciplinary teams on research projects and on requests for consultancy.

You can consider Institute for Cultural Heritage in The Netherlands (ICN) as a Panda Software pioneer. Already in 2001, the ICN gave his trust in antivirus protection to Panda Software. In that time, the ICN was one of the first clients in the Netherlands that installed Panda Security Global Virus Insurance on their complete corporate network. Today the Global Virus Insurance is better known as EnterpriSecure.

A part from the EnterpriSecure protection, there is also the standalone protection of 50 workplaces with Panda Titanium. These people work for ICN but are not always connected to the network and their type of work demands other measures of protection.

“We have chosen for the protection of Titanium because of the ease of use. As soon as it is installed Titanium Antivirus gets down to work” said Ernst te Brake, Network and System Manager of ICN.

Details

- Customer's size: Medium.
- Sector: Cultural Institution.
- Country: The Netherlands.

Benefits

- Minimum CPU usage prevents slowdowns when the antivirus is running.
- Quick Setup, thanks to possibility of uninstalling previous antiviruses remotely.

Regarding the main benefits that EnterpriSecure provides to its organization, te Brake mentions: "The advantage of the EnterpriSecure is the extended range of modules. The EnterpriSecure is a complete package that protects not only computers running Microsoft Windows, Novell Netware but also Domino servers and Exchange".

Key Features

- Up-to-the minute antivirus protection. Updates are automatically distributed across networks at least once a day transparently and without user intervention.

- Multiplatform support of computers with DOS, Windows, Novell and Linux operating systems.

- CommandlineSecure, which allows network administrators to easily integrate antivirus protection in third-party applications.

- AdminSecure console for remote management of several mail servers such as Exchange or Lotus Domino.
