

Panda GateDefender eSeries HotSpot

Extend your service portfolio and boost the quality of your business by offering a secure, high-quality Internet connection to your customers and visitors.

Sending email, checking the news or communicating via Voice over IP are everyday activities that your customers and visitors expect to be able to perform with their devices at any time. Provide them with a high-quality, controlled, easy-to-use Internet access service that meets their needs.

Panda GateDefender HotSpot is a free module included in all **eSeries** models that lets you extend your service portfolio, setting you apart from your competitors and improving customer loyalty.

Hotel guests will be able to plan their stay and their activities by **surfing the Web from their room**, as well as from the hotel's lobby, bar, and restaurant, both using their favorite devices. The availability of an Internet connection has become a **crucial factor in the choice of a hotel**.

The **café** is the ideal stopover for taking a break from everyday activities. Today students, professionals and tourists expect to turn on their mobile devices (laptop, tablet, mobile phone, etc.) **to take advantage of breaks** and read online news-papers, check e-mail, or get updated information about the city they are visiting.

The long waiting times at **airports**, which have been recently increased by additional safety-control procedures, may negatively affect the travel experience. At the same time, the stay may represent an opportunity for travelers, who can browse the Internet and obtain information about the destination place.

Access to online resources is an essential complement to the range of intellectual activities that take place within a **library**. You will be able, for example, to simplify the consultation of your library's catalog, as well to manage key procedures (such as loans) more effectively, and to provide exclusive access to electronic resources, such as e-journals

Complete solution adapted to your business needs

- It is suited for a great variety of environments including hotels, cafés, airports and offices thanks to its wide range of models and a design that facilitates integration into existing infrastructure.
- It doesn't require additional hardware or costly software licenses; it only requires an Internet connection.

Billing metrics tailored to your needs

- Multiple billing and invoicing modes for the resources used by users.
- Freely configurable connection support limited to your customers or visitors only.

Service customization with your brand

- Customize and brand your hotspot login page with information about your product portfolio.
- Monetize the service with banners and advertising.

Maximum security and accurate monitoring of network resources

- Easily check time and bandwidth usage per customer or visitor.
- Isolate your internal network from the guest network, preventing problems and data leakage.
- Offer a secure Internet connection service with all the benefits of using a **UTM** appliance: Web filtering, antivirus and anti-malware scanning, anti-spam filtering and protection against fraudulent emails and websites.

Easy-to-install, maintenance-free service

- Use the **Panda SmartConnect™** feature to provide automatic secure Internet connectivity to visitors. No human intervention or technical knowledge required.
- Forget problems with **Panda Perimetral Console**: Simply sit back and watch your revenue grow.

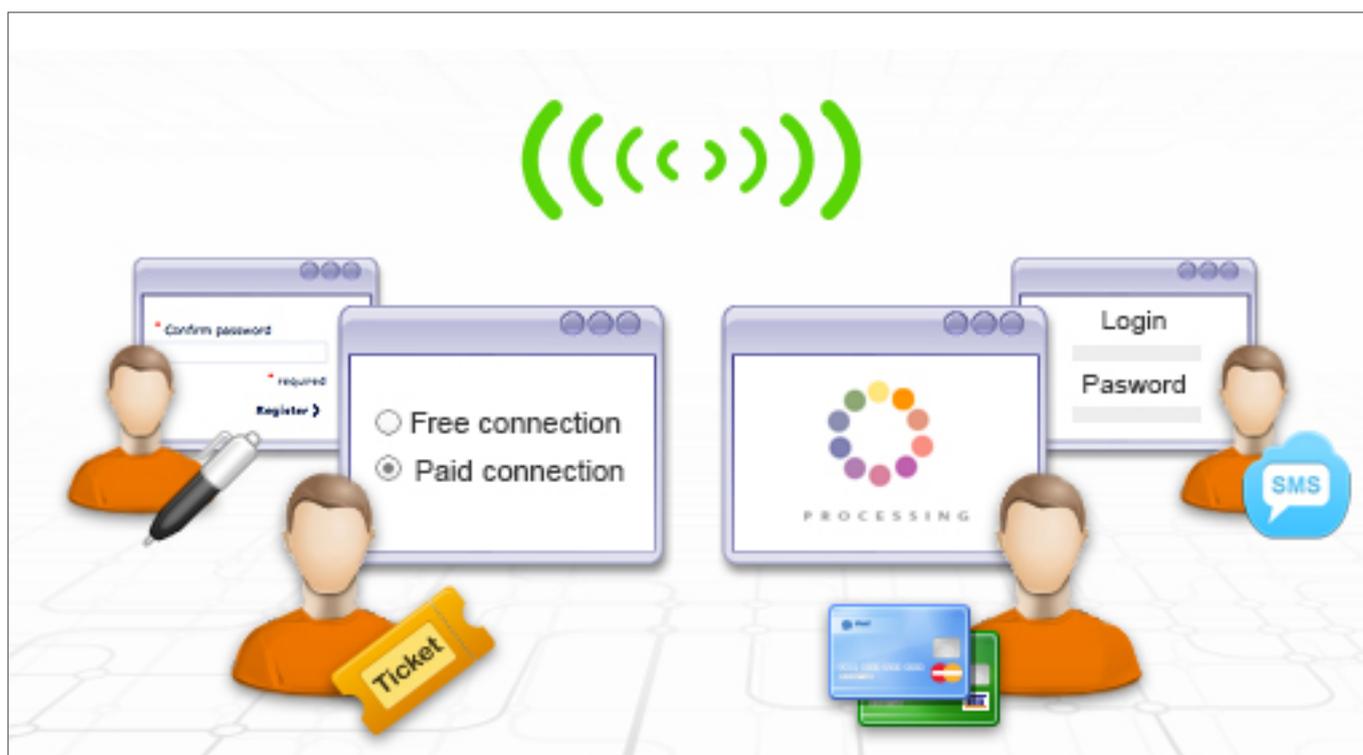

Panda GateDefender eSeries SmartConnect™

Allow new connections automatically with Panda SmartConnect™.

Your customers and visitors can connect to the Internet in **4 simple steps**:

1. Open their browser and fill out the form with contact information.
2. Choose the connection type they prefer.
3. Pay with PayPal (unless the connection service is free).
4. Check their mobile device and use the user name and password sent by email to log in with their browser.

Once you have registered your **Panda SmartLogin** account it will be able to recognize devices without having to reenter user credentials.

Features

Configurable Internet connection service

- Customize the welcome page with your own logos, graphics, banners, advertising, etc.
