

Panda GateDefender eSeries HotSpot Healthcare

Ideal for hospitals, health centers, waiting rooms
and retirement homes

The wide range of people visiting and working in hospitals and private clinics require a wireless Internet connection far more sophisticated than a standard Wi-Fi connection. Both medical and administrative staff need secure, unlimited access to patient records, treatment details and other important confidential information. Teaching staff and students also require high quality access to medical information from outside, which must be filtered to block unrelated content. For all these reasons, an Internet connection free from viruses and spam is a highly-valued asset.

On the other hand, the Internet access conditions for visitors and patients in wards and waiting rooms may be quite different. Whether free or pre-paid, it is often essential **to set bandwidth consumption limits to ensure optimum distribution of network resources.**

Offer quality, flexible Internet access in line with the needs of your users with **Panda GateDefender eSeries.**

Benefits

Free or paid Internet connection

Offer free or paid Internet access, depending on the user profile

- Assign upload/download bandwidth to each user.
- Set daily, weekly or monthly data transfer limits for frequent users.
- Determine the maximum connection time for each visitor or customer.
- Pre-paid billing including support for PayPal
- Post-paid billing with usage integrated in the software used in your hospital
- Billing by connection time or data transfer volume

Service customization with your brand

- Your customers and visitors can see a login page customized with your organization's image and the services you offer

Maximum security and accurate monitoring of network resources

- Offer a secure Internet connection service with all the benefits of using a **UTM** appliance: Web filtering, antivirus and anti-malware scanning, anti-spam filtering and protection against fraudulent emails and websites.
- Reuse your Internet infrastructure securely and without data leakage or problems by isolating your hospital's internal network resources.

Panda GateDefender eSeries HotSpot Healthcare

Ideal for hospitals, health centers, waiting rooms and retirement homes

Easy to manage service with zero maintenance

- Use the **Panda SmartConnect™** feature to provide automatic secure Internet connectivity to visitors and patients. No human intervention or technical knowledge required.
- Don't worry about previous account credentials as you can automatically configure their expiry.
- **Panda Perimetral Console** offers your partners the tools needed to ensure quality, uninterrupted service: incidents are resolved rapidly and remotely without going on-site.

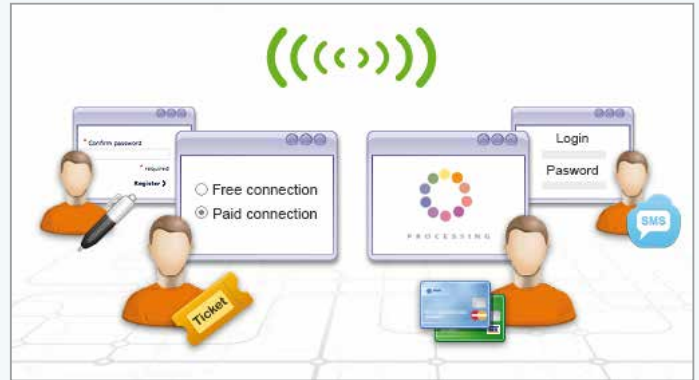

Panda GateDefender eSeries SmartConnect™

Allow new connections automatically with **Panda SmartConnect™**.

Your customers and visitors can connect to the Internet in **four simple steps**:

1. Open their browser and fill out the form with contact information
2. Choose the connection type they prefer
3. Pay with PayPal (unless the connection service is free)
4. Check their mobile device and use the user name and password sent by email or SMS to log in with their browser

Once you have registered your **Panda SmartLogin** account it will be able to recognize devices without having to reenter user credentials.

Features
