

HOW CAN YOU MANAGE WHAT YOU CAN'T SEE?

Inventory

Business challenge: You can't manage it if you don't know it exists

Do you have 100% permanent visibility of all hardware and software on your IT estate?

With dispersed offices around the country, and with an ever increasing number of road warriors and home workers, it's really difficult to know what you've got out there.

However, due to compliancy issues, annual budgeting and "one off" projects, you need to be able to locate that information quickly, without having to send technicians from one office to another, filling excel sheets.

The solution: Know what you have

Systems Management Inventory module will provide you with permanent up-to-date information and complete visibility of all your IT devices.

All inventory data at your finger tips

How many "once off" tasks does your IT dept run per year related to software / hardware? Whether it is for a compliancy audit or budgeting for your HW for the next year these tasks are generally time consuming. With Systems Management you can access all hardware and software centrally for one, some or all devices.

So what's included?

Hardware and software inventory

Control what software is installed on which devices. Define and control what software can and cannot be used on one, some or all devices.

Hardware/Software/ System change logs

Expedite problem diagnostics by getting all information on your hardware/software and system changes for each device at a glance.

Software licensing control

Keep track of the number of licenses for any software package used across your entire IT estate.

Get an overview of your entire IT estate at a glance

Quickly get a global view of your entire IT estate from one dashboard. See how many devices are online / offline. How many devices are not protected by Antivirus / Firewall?. How many patches your system is missing?

Get the detailed data you need: Filters

Find any information about your company's hardware and software in just a few seconds and identify which devices have outdated versions of applications, which have the oldest hardware, which are running out of disk space, etc.

Know how many licenses you are using

Define thresholds for software licenses to ensure you are not exceeding your limit and identify which specific devices have the software in question installed.

How much energy is your IT system consuming?

From the energy usage audit not only can you see what you have got you can also see how much energy it is consuming and how much that energy is costing your company. Drill down and see how much each specific device costs. This can help you to implement and track green initiatives in your company.

Expediting troubleshooting: Change logs

How much time is generally spent on diagnosing end user issues? Over email or by the phone the general question is "What did you do to your PC?" to which the answer is generally "nothing, honest!" The change log will show you all systems, hardware and software changes expediting troubleshooting by identifying incident triggers in a fraction of the time.

The virtuous circle:
