# How did they gain control of my system?

A Trojan is a popular type of malware that is designed to steal information or give cyber-thieves control of your computer.
While this Trojan horse may seem harmless, it is a trick! Trojans create back doors and give unauthorized users control of your system.

Submit your email address

SEND

You'll fall into its clutches... It'll get you if you have security holes in your system, surf unsecure websites, or simply, because you're too trusting.

Ransomware is the Trojan of the moment it's incredibly popular with cybercriminals because it brings in the money, quick and easy.

Passwords

Webcam

Contatos

GPS

They'll silently steal your company's information. They'll take pictures with your webcam, modify your address book, and even locate your systems with the GPS.

Take the appropriate measures to prevent a Trojan attack by protecting your systems with a solution that's capable of detecting and blocking advanced attacks like this one.
